

Overlay Set Installation Instructions

For Photoshop Elements

Your downloaded overlay zip file contains the following:

1. An action set (.atn file) containing an applicator action that will help you place your overlay onto your image.
2. An overlay folder containing your overlay files (JPG or PNG images depending on the set).

Save the overlay folder to an easily accessible location on your computer. When you play the applicator action, a pop-up box will appear prompting you to select the overlay you wish to use. Once the overlay is placed, the applicator action will finish running.

To load the .atn file into Photoshop, follow these seven easy steps:

1. Save your actions in an easy to find location on your computer.
2. Open Photoshop and make sure you are in **Expert** mode.
3. Open Photoshop and go to the actions palette. If the actions palette is not visible, go to 'Window', and then click 'Actions' in the dropdown.
4. In the top right corner of the actions palette, click on the small box containing an upside down triangle and 4 horizontal lines.
5. From the drop down menu, select 'Load Actions'.
6. When the pop-up box appears, navigate your way back to the location where you saved the actions folder. Inside the actions folder, select the file ending in .atn – then click 'Open'.
7. The actions are now loaded into the actions palette.

Note: Remember to back up the action files and overlays on an external storage device.
